WHY WON'T MY HYDRAULIC BED STAY DOWN ?

1. In fact, nine times out ten the reason why hydraulic won't close is because you need to put your mattress on top of the bed. Yep, it really is that easy. This is because the hydraulic pistons need the weight of the mattress to provide enough pressure to close your bed.

2. However, what if you've put your mattress on your bed and you're one of the unlucky ones who finds that their hydraulic bed still won't stay down?

As previously mentioned, they require pressure in order to close. However, occasionally as well as placing the mattress on the bed you will initially have to apply some physical force yourself to close the bed. Don't worry you won't break it ! ! !

WARUM BLEIBT MEIN HYDRAULISCHES BETT NICHT UNTEN ?

1. In neun von zehn Fällen liegt der Grund dafür, dass sich die Hydraulik nicht schließen lässt, darin, dass Sie Ihre Matratze oben auf das Bett legen müssen. Ja, es ist wirklich so einfach. Das liegt daran, dass die Hydraulikkolben das Gewicht der Matratze benötigen, um genügend Druck zum Schließen des Bettes zu erzeugen.

2. Was aber, wenn Sie Ihre Matratze auf Ihr Bett gelegt haben und zu den Unglücklichen gehören, die feststellen, dass ihr hydraulisches Bett trotzdem nicht unten bleibt?

Wie bereits erwähnt, muss man Druck ausüben, um sie zu schließen. Gelegentlich müssen Sie jedoch nicht nur die Matratze auf das Bett legen, sondern zunächst selbst etwas Kraft aufwenden, um das Bett zu schließen. Keine Sorge, Sie werden es nicht kaputt machen ! ! !

POURQUOI MON LIT HYDRAULIQUE NE RESTERA-T-IL PAS EN BAS ?

1. En fait, neuf fois sur dix, la raison pour laquelle le système hydraulique ne ferme pas, c'est parce que vous devez mettre votre matelas au dessus du lit. Oui, c'est vraiment aussi simple que cela. Ceci est dû au fait les pistons hydrauliques ont besoin du poids du matelas pour fournissent suffisamment de pression pour fermer votre lit.

2. Mais que se passe-t-il si vous posez votre matelas sur votre lit ?

et tu fais partie des malchanceux qui trouvent ça le lit hydraulique ne reste toujours pas baissé ?

Comme mentionné précédemment, ils nécessitent des pressions pour fermer. Cependant, de temps en temps, en plus de placer le matelas sur le lit, vous devrez d'abord appliquer une certaine force physique vous-même pour fermer le lit. Ne vous inquiétez pas, vous ne le casserez pas ! !!!!

★ IMPORTANT NOTICE ★

HYDRAULIC BED OPERATING INSTRUCTIONS

Once your bed frame is completely assembled, the slat unit will not operate correctly unless a mattress is placed on the slat frame. Position the mattress on the slat frame whilst it is in the closed position.

PLEASE NOTE - It takes a lot of force to make the initial movement of the ottoman. This is a design feature of the product so that it does not fall shut the nearer to being closed the ottoman is, the easier it is to move. When the ottoman is almost shut, it will close completely under its own weight.

When lowering the slat unit for the first time, take care to make sure it does not rub unevenly on the inside face of the side rails. If it does, the bed has been assembled slightly out of square. This can be rectified by moving the foot end of the bed slightly to the left or right whilst leaving the head end stationary.

PISTONS

The pistons used in the construction of this product are extremely strong and cannot be operated by hand when taken off the ottoman. All pistons are tested for correct pressure and operation before being attached to the slat unit.

Initially it might appear that the pistons are very stiff when opening and closing the ottoman.

THIS IS PERFECTLY NORMAL

When fully assembled and the mattress is in position, please raise and lower the ottoman 4/5 times to ensure the gas piston are fully lubricated.
